## Native L2TP/IPSec VPN for Mac OSX

To use Identity Cloaker service through Mac OSX native L2TP/IPSec VPN please follow this tutorial.

) > System Preferences, and click Network.

Select your VPN service in the list.

If there is no VPN connection listed, then click + over the lock icon, and in the menu "Interface" pick VPN, and VPN type L2TP/IPSec, click "Create".

Add server address: uk12.identitycloaker.net (for UK12 server, without "http://" and "/" after)

Account name is your Identity Cloaker username (all in lowercase), click "Apply".

(The screenshot displays my username "jasek99" but you have to enter your own)
