

PC - Windows

Creating L2TP/IPSec VPN with helper utility

We have developed an utility which will help you to create L2TP/IPSec VPN connections instead of manual configuration.

You can get it from [here](#).

- **Identity Cloaker Username / Password: Please use the same credentials as for your Member area and Identity Cloaker application. If you don't remember then you can reset it [here](#)**
- **Verify user online before creating VPN:** This will check your user Identity Cloaker account online so created VPNs will be using the right credentials. It is possible to disable this option if the application is not able to communicate with our main server (error displayed).
- Check boxes for VPNs you want to create. These connections will appear at Control Panel->Network and Internet->Network and Sharing Center->Change adapter settings

PC - Windows

Identity Cloaker L2TP/IPSec VPN helper Version: 0.2.0.0

User Credentials

Identity Cloaker Username: — Your IDC username

Identity Cloaker Password: — Your IDC password

[I have forgotten the credentials](#)

☒ Verify user online before creating VPN — Verify your credentials. Possible to uncheck

Servers

	Name	Address	Comment	Select
	IE4	IE4.identitycloaker.net	Ireland, Dublin	☐

UK servers selected out of the box —

Select all servers Unselect all servers

Progress

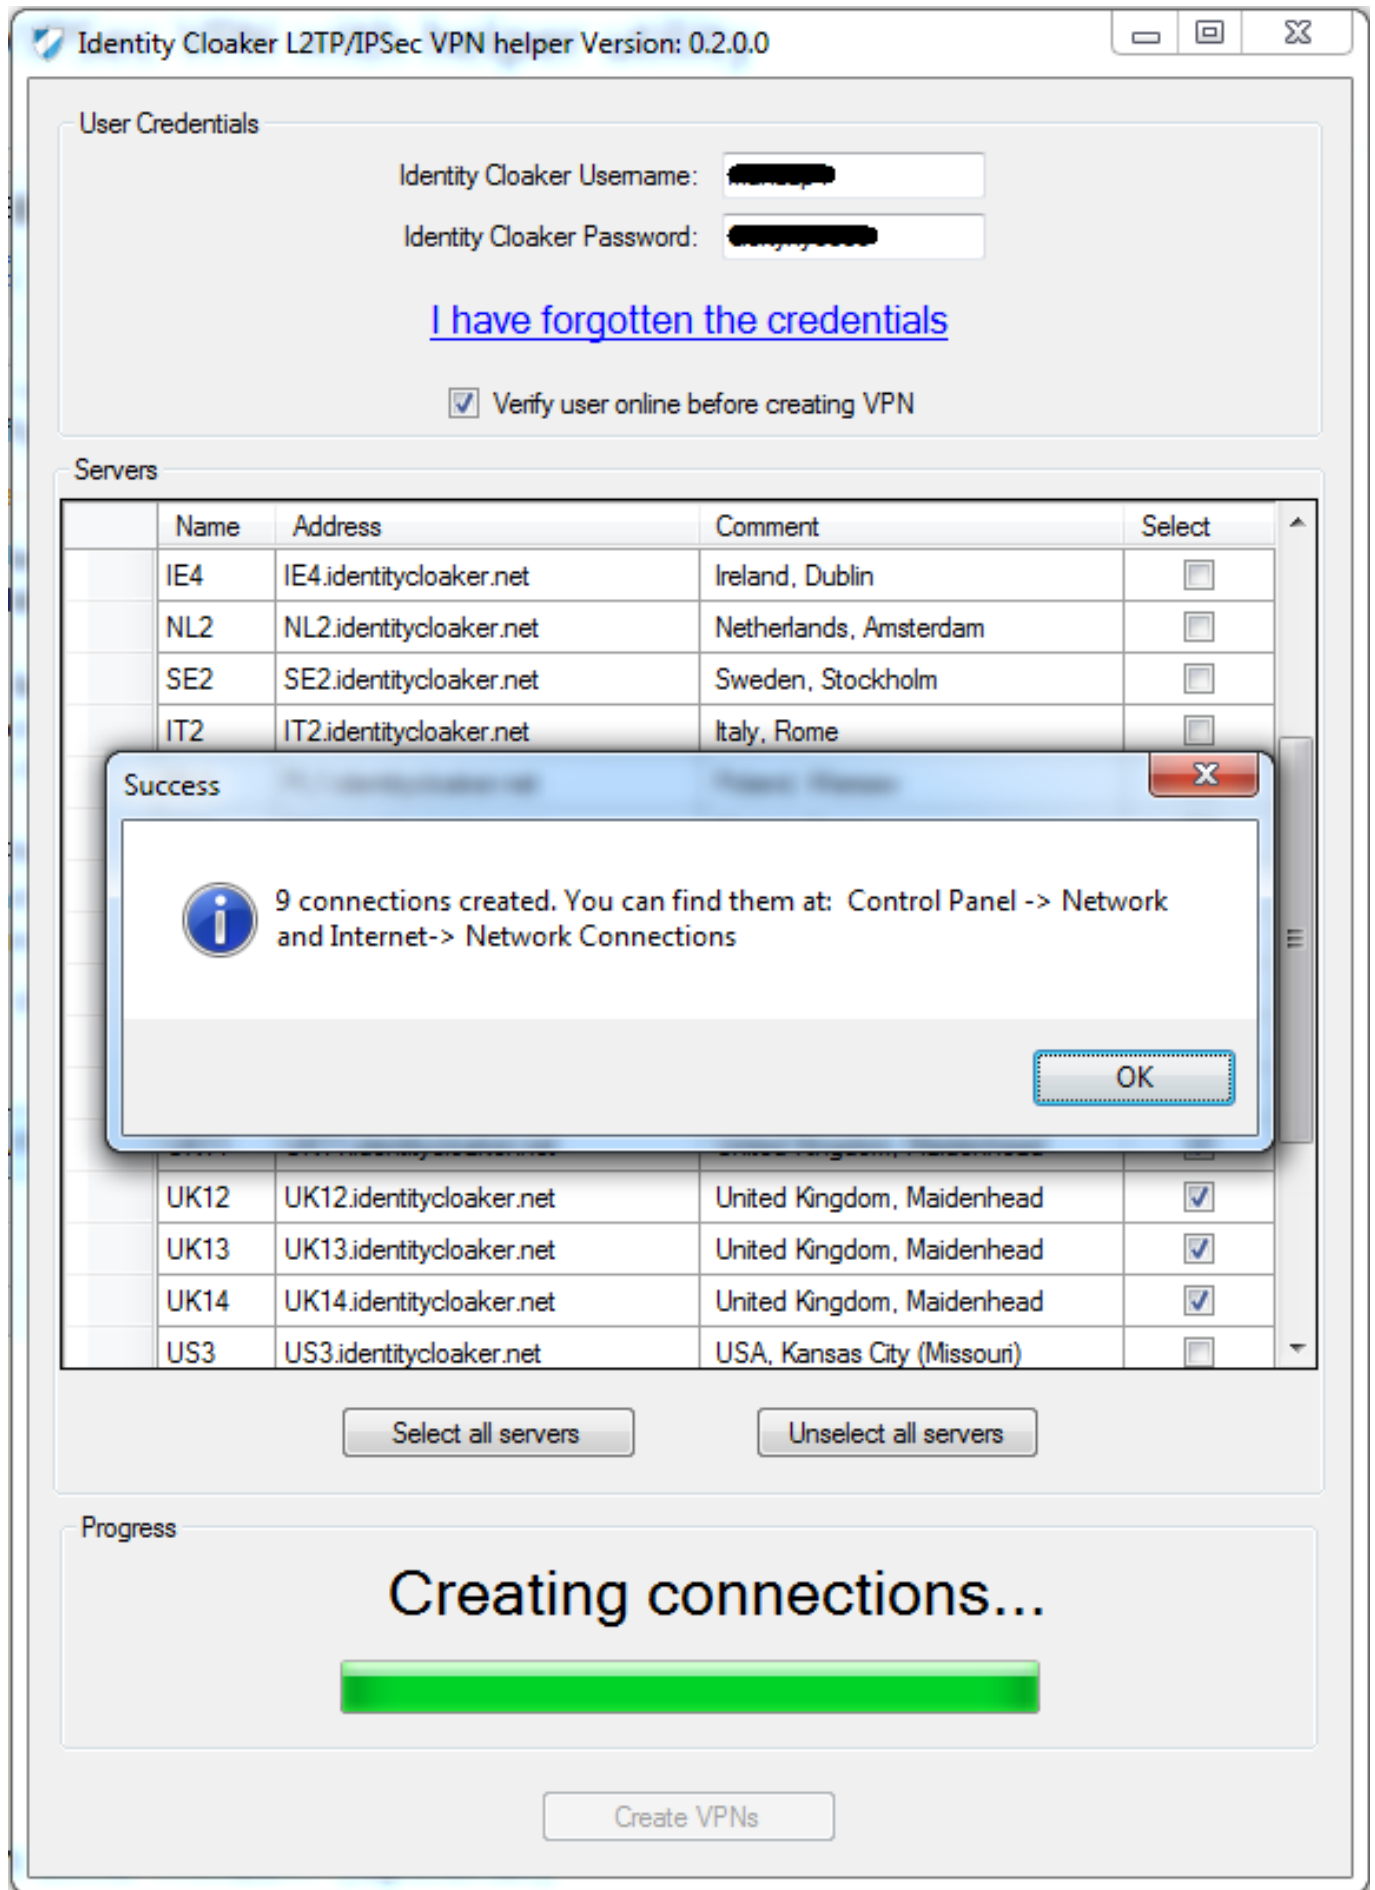

Waiting for the job — Ready to fire up the job

— Start up creating selected VPNs

PC - Windows

You should see similar box after the job is done.

PC - Windows

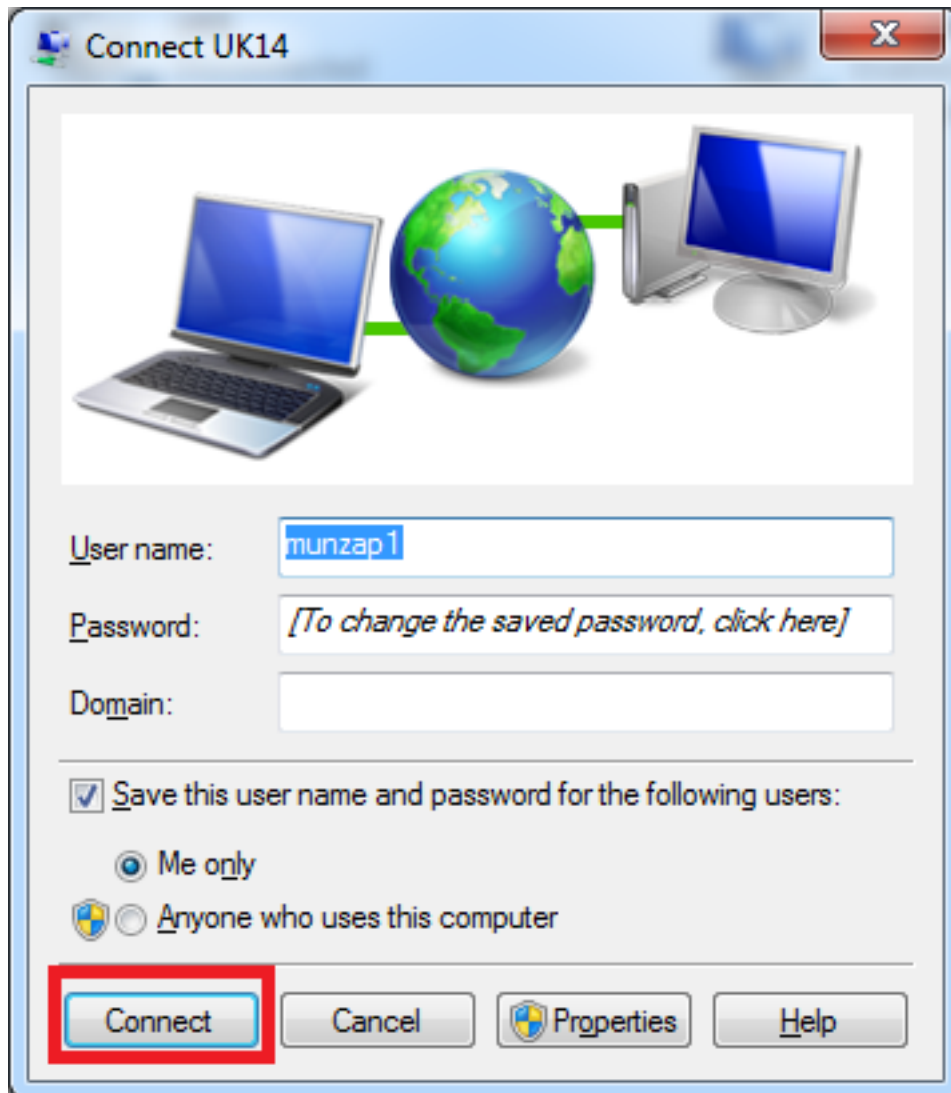

PC - Windows

You can now find newly created VPNs at Control Panel->Network and Internet->Network and Sharing Center->Change adapter settings . It is possible to connect with a right click on the selected VPN.

PC - Windows

Connecting dialog follows.

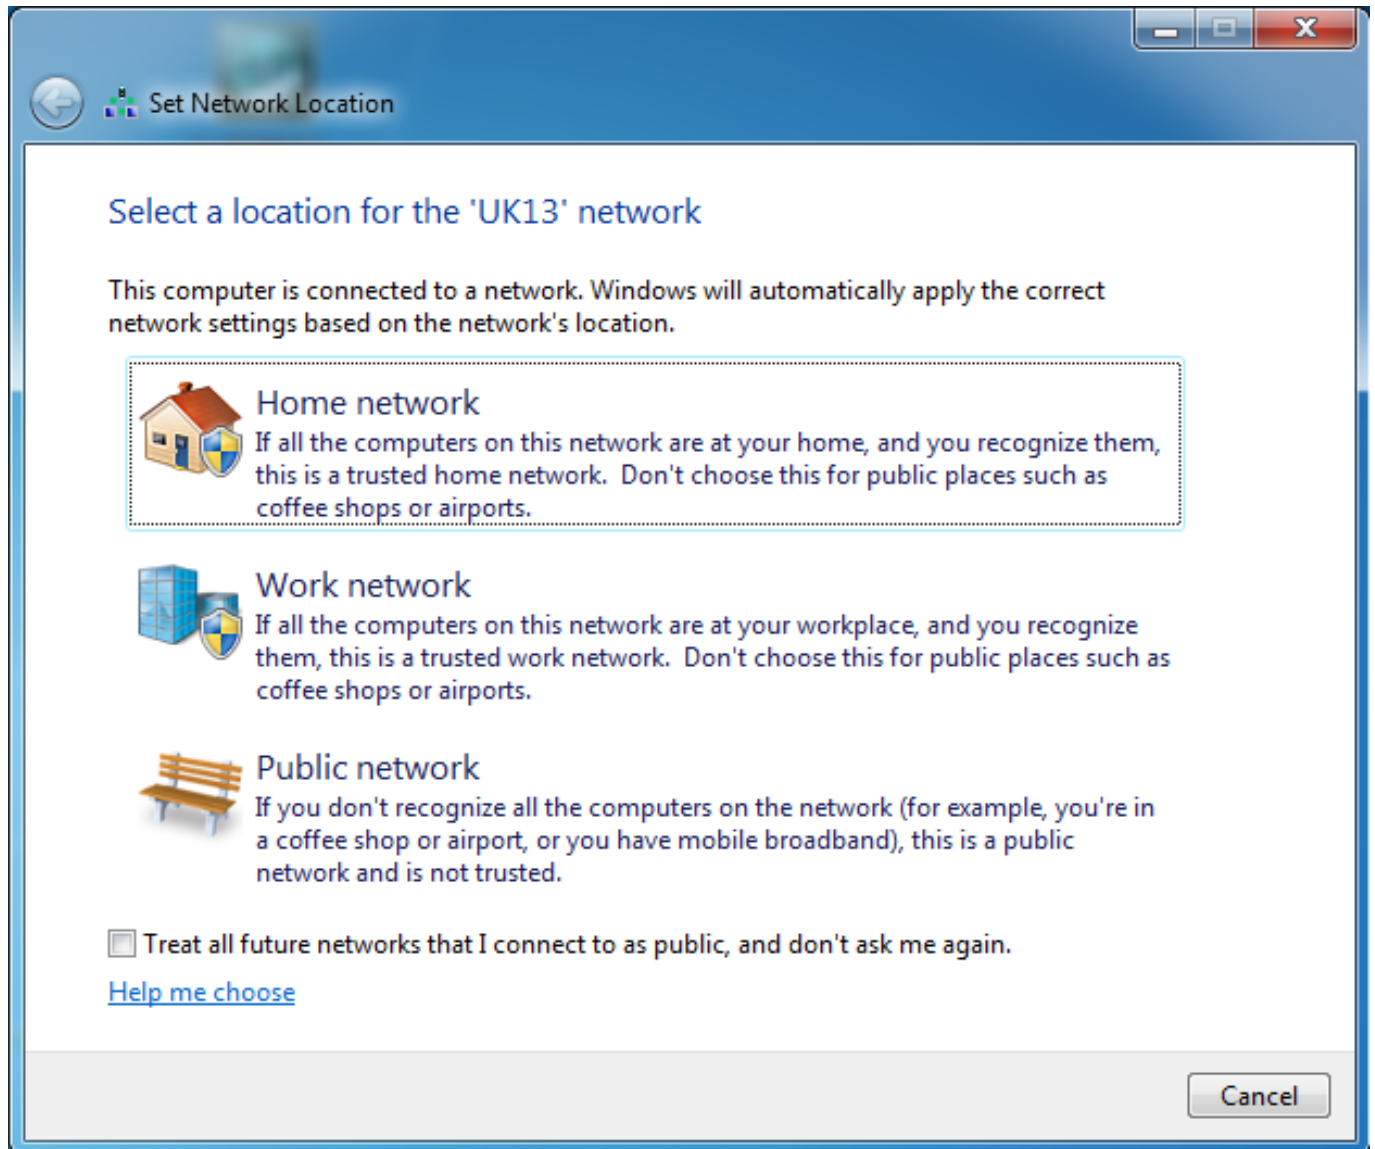

Press "Connect" button to connect

Now the connection attempt will follow.

If you see this screen after successful connection then please click **Home Network**

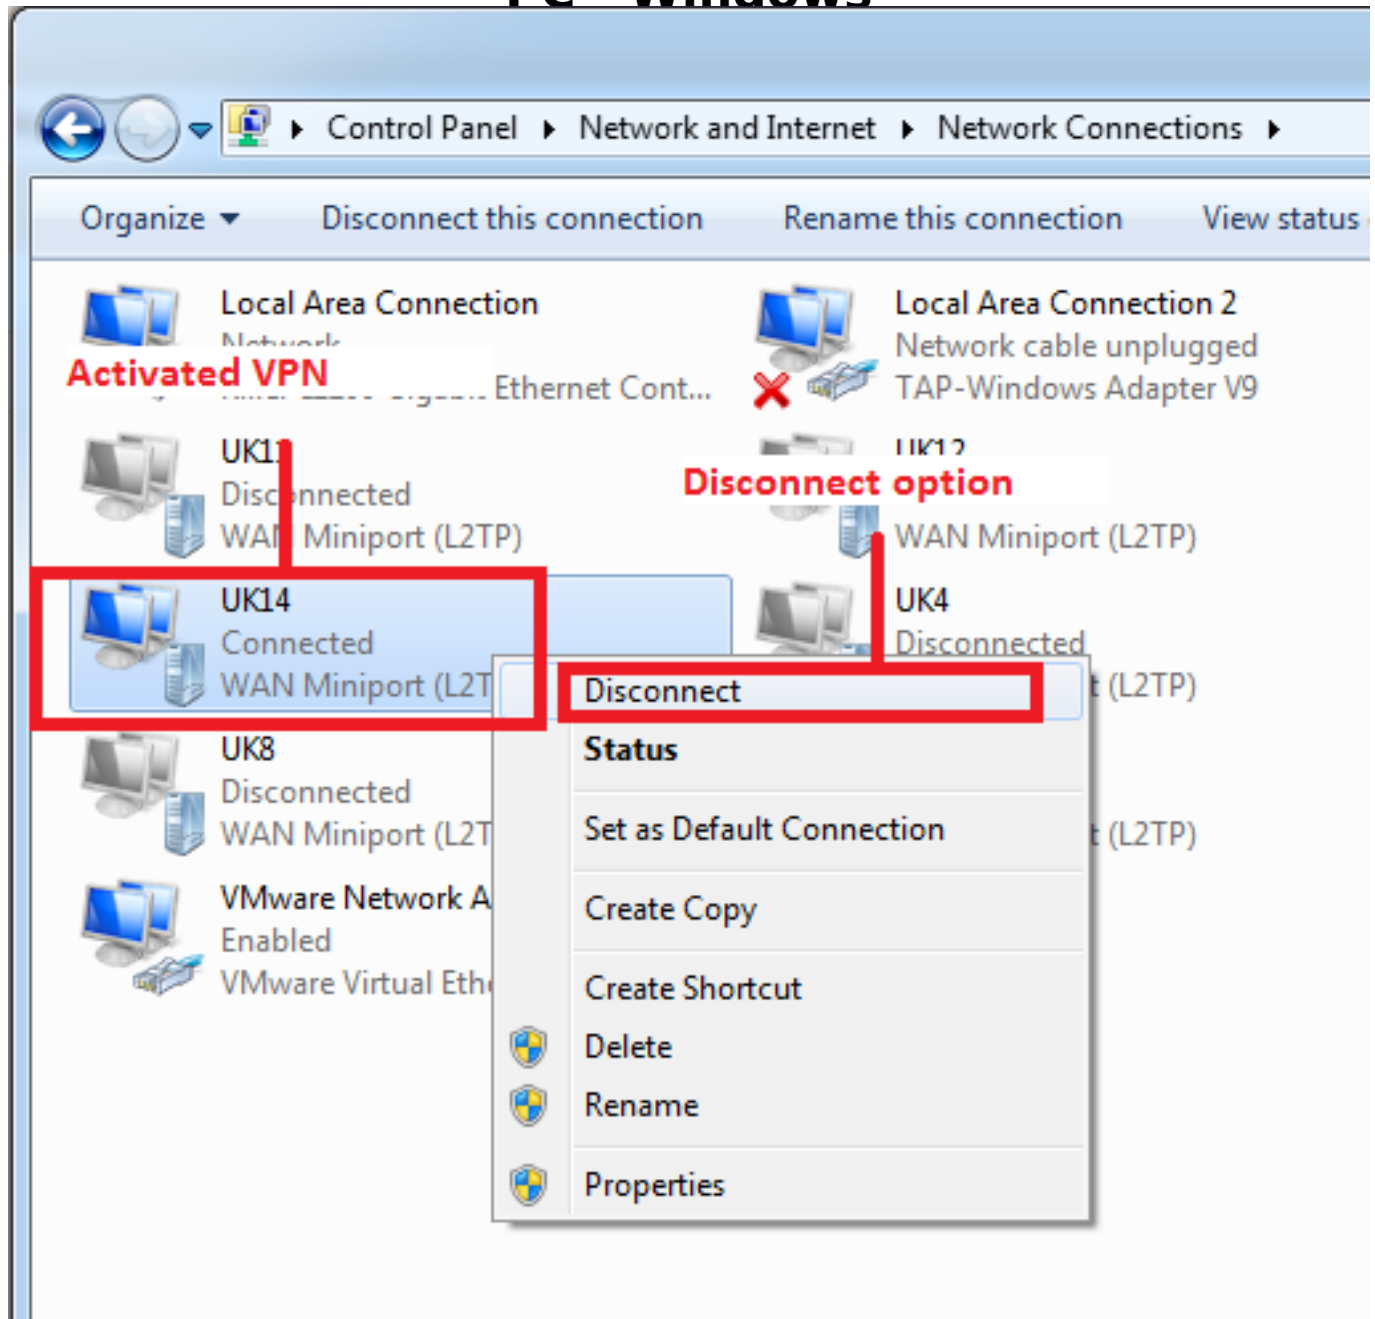

PC - Windows

To verify your new IP please check this [page](#). Now the IP should be different to the IP before VPN activation.

You can disconnect his way:
